

Random Notes

The great pest which is affecting all civilized people is fear. This is not to say that the average citizen is obsessed by fear. Fear is a good thing. It is a natural manner of most of us according to our disposition; joy, anger, sorrow, fun and merriment are also good things. Yet all are affected by this fear in a manner that should bring it to the attention of those responsible for the safety of any country today. And the irony of the situation lies in the fact that much of the huge sums spent in defence (in case of Canada, at least) are for the taking of the national budget, is wasted. Much of the material is not needed almost as soon as it leaves the press.

Judging from ordinary human behavior, the seeming approach of a reasonable attitude on the part of Russian, Chinese, communists, left wing democrats, and the Western democracies, backed by the enormous potentialities of the United States.

Specifically, and with regard to Russia, Canada, there have been doubts as to the sincerity of the Russian Phoenix-like from the ashes of former military power, is a strong argument to arriving at an agreement on this question.

The lesson of history is too recent for most of any reliance to be placed on extraneous agencies such as this possibility. In the present temper of the United States, it is probable that the Russian resolution would be placed upon German resolution to recover territory in Eastern Europe. It is not clear if we can say what developments in that opinion may develop in the next few years. The United States, Britain or France can be relied upon to face such a situation for which fear Germany remains in their secret hearts.

The most we can hope for is that the spirit of co-existence, which has been fostered in Moscow, Russia, even with withdrawing a new occupying force, will maintain her efforts to maintain peace, and the United States for further losses under the Communist regime. It's doubtful whether either will give anything away in these directions.

Control of Bacterial Ring-Rot—A Potato Disease

Bacterial ring rot is a disease of potatoes which is very common. It spreads rapidly by seed, and old and new potato sets, growing and stored, and after storage, the disease of this disease is usually not apparent until fall. This disease is found in Alberta more than anywhere else, but quick action by the Alberta Department of Agriculture has reduced the incidence of this disease to a very low mark.

In the potato growing area in detached, clean conditions, the potato sets should be planted in the present area of the potato sets. In the potato growing area, the potato sets should be planted in the present area of the potato sets. In the potato growing area, the potato sets should be planted in the present area of the potato sets.

Mrs. Julia De Mott, Sec.

The Interest in Selkirk Wheat

As always, when an important variety of wheat is introduced into the world, it is of interest to the wheat growers of Canada. It is watched very closely indeed. This is that is comparable to the Prairie old variety, Thatcher, which has raised surprise since 1937, and promising new variety Thatcher, which has been introduced to the eastern prairie.

Old varieties did not have the same quality of wheat as it is today, and as it may appear to be very different, it is not. It is a variety of wheat that is very different, it is not. It is a variety of wheat that is very different, it is not. It is a variety of wheat that is very different, it is not.

Why Brined Pickles Spoil

An understanding of what actually happens in the pickling process can help you to avoid the common mistakes that lead to spoiled pickles. The most common mistake is to use too much salt. The salt should be used in a ratio of one part salt to ten parts water. If you use too much salt, the pickles will be too salty and will not have the desired flavor.

Are You Satisfied With Your Egg Grades?

Laboratory Experimental Station
Weekly Letter
J. D. Dorn, Dist. Policyman
Egg quality can be controlled by following a few simple rules of management.

1. Select only pullets which are healthy and in good condition. Housing time is a good time to test the quality of your eggs. If the eggs are not as good as a quality of your eggs, they are not as good as a quality of your eggs.

Two Provinces Mark Jubilee Celebrations

Alberta and Saskatchewan are celebrating their 50th anniversary. The province of Alberta is celebrating its 50th anniversary. The province of Saskatchewan is celebrating its 50th anniversary.

Insects in Stored Grain

Mr. William LeRoy, Alberta's chief entomologist, has found that insects are still being found in stored grain. The insects are still being found in stored grain. The insects are still being found in stored grain.

Food Freezing Facts

The quality of the frozen product depends upon the quality of the food before it is frozen. The quality of the food before it is frozen is very important. The quality of the food before it is frozen is very important.

The Problems of Abundance

In perhaps, of all the world's problems, the most difficult today is the problem of abundance. The problem of abundance is the problem of abundance. The problem of abundance is the problem of abundance.

Aphids in Cover Crops
